

Updating Your ARO-1130CA BIOS

You may need to update your ARO-1130CA BIOS if

- Adaptec adds new features to the BIOS.
- Adaptec Technical Support recommends that you update the BIOS in order to fix a problem that you have encountered.
- Your computer system uses a motherboard that requires a different ARO-1130CA BIOS. (You can tell that this may be a problem if you do not see the ARO-1130CA BIOS banner when you boot your computer system.)

How Do I Update the ARO-1130CA BIOS?

Adaptec has created an automatic ARO-1130CA BIOS update program which you can download from the Adaptec RAID Web page.

Caution: We highly recommend that you back up the data on your array(s) before you update the ARO-1130CA BIOS. This will ensure that your data is completely protected.

Follow these steps to update the ARO-1130CA BIOS:

- 1 Access Adaptec's RAID Web site at <http://www.adaptec.com/RAID/RAIDport2/>
- 2 Click on the appropriate motherboard BIOS file in the RAIDport II compatibility list.
- 3 Follow the simple instructions to download the self-extracting BIOS update program.
- 4 Run the BIOS update program on the computer system in which the ARO-1130CA board is installed.

For more information on updating the BIOS, see the *readme.txt* file included with the BIOS update program.
